Course Description: A study of appropriate physiological functions, exercise physiology, mechanical implications, fitness measurement, procedures and practical application through programmed exercise.

Course Objectives: This course serves the undergraduate as a free elective and faculty, faculty spouses and general community members as an aid to a healthier adult life.

The student will be able to:

1. Understand the effects of exercise on the human body.
2. Gain a better knowledge of physiological functions relating to digestion and exercise.
3. Understand the mechanical reasons behind certain basic movements used in exercise to ensure adequate success in activity areas.
4. Learn how to use simple measurement devices when evaluating skills and fitness.
5. Learn how to execute exercise programs for selected results.
6. Improve over-all physical fitness and reduce excess weight.
