Weight: 7.6 oz / 214 g

3D SYNQ
A unique Fitting Ring built into the Mask Skirt providing an ideal fit for all face shapes.

Swift Buckle 3D
A new low-profile buckle and mask strap for smooth effortless adjustments.

Freedom Technology (Freedom Dry)
Enhances comfort and fit by utilizing a revolutionary low friction skirt surface.

3D Mask Strap
TUSA's unique 3D design contours to the shape of your head.

Round Edge Skirt
Round edge skirt improves both seal and comfort of the mask.

UV 420 Lens Treatment
Protects against harmful high-energy visible (HEV) light.

CrystalView Optical Glass
Provides superior clarity, color and transmission of light.

Anti-Reflective (A/R) Lens Treatment
Anti-reflective coating enhances overall vision.

Anti-Fog Film
Durable, long lasting material to greatly improve visibility by preventing mask fogging.

Panoramic View
Mask providing an extra wide field of view.

Zensee Pro Features

- UV 420 Lens Treatment
- Anti-Reflective Lens
- CrystalView Optical Glass
- Freedom Film (Large/1-piece)

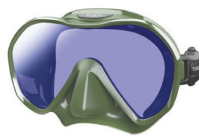

M1010S

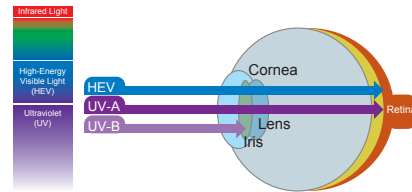

QBA

QGMA

QKHA

UV 420 Lens Treatment protects against harmful high-energy visible (HEV) light and its potential to damage the Retina. HEV light is not just present on sunny days, but overcast days as well. Therefore, it is extremely important to protect your eyes against UV and HEV light in all weather conditions when diving.

SWIFT BUCKLE 3D

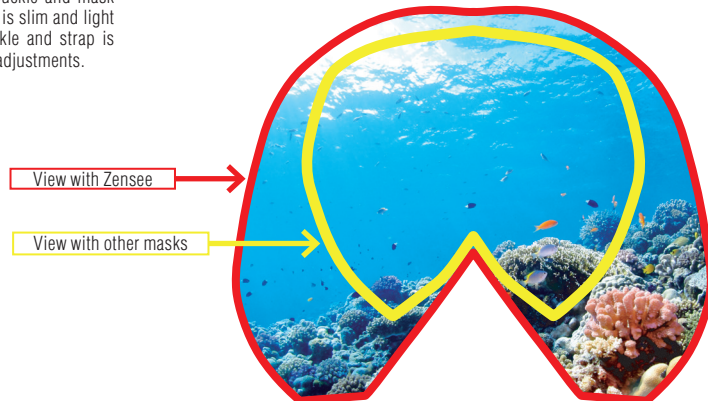

TUSA has designed the perfect buckle and mask strap. The NEW low profile buckle is slim and light weight. The easy adjustment buckle and strap is silent and effortless when making adjustments.

NEW ECO-FRIENDLY MASK CASE

WIDE VISIBILITY & LOW VOLUME

The TUSA M1010 mask provides a wider field of view than other masks due to its large lens and low volume design.

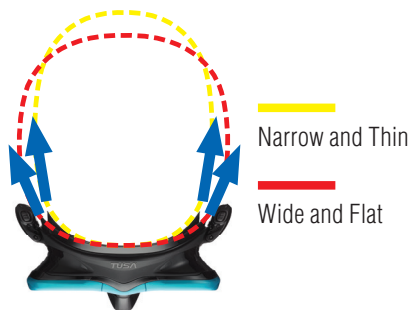

3D SYNQ Technology

TUSA has developed a unique Fitting Ring that has been built into the Mask Skirt. This technology enables the Mask Skirt to mold to all face shapes providing the perfect fit, seal, and underwater experience.

Sync to Head Sizes

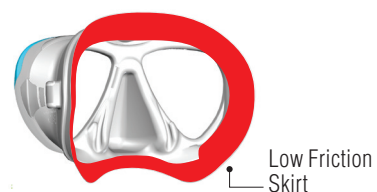

Sync to different head sizes by pulling directly on the 'fitting ring.'

Sync to Facial Shapes

Sync to different facial shapes with 'sealing surface' by hinge.

Freedom Dry

Freedom Dry enhances comfort and fit by utilizing a revolutionary low friction skirt surface.

The skirt fitting line (shown in red) features a low friction surface that delivers a superior seal and increases the facial area contact patch while significantly reducing excess skin tension. The result is a soft and supple feeling mask with a dramatically improved seal.

M-211

M-211QB

Freedom Technology **PAT.**

Freedom Fit

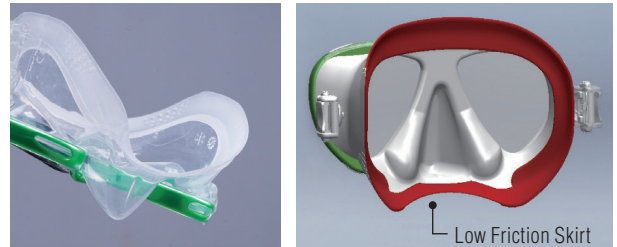

Dimpled Skirt:
 Key areas around the forehead and cheek bones have been designed with dimples which combine to increase the skirt's softness, flexibility and skin surface contact. This also greatly reduces leakage and enhances comfort.

Stability Ridges:
 As water pressure increases a mask will compress inwards toward the face often causing further leakage. Areas under the cheek bones have been reinforced with stability ridges to minimize this compression maintaining ideal skin surface contact.

Varied Silicone Thickness:
 When in usage, a regulator or snorkel mouthpiece can distort areas of the nose pocket and mouth section causing leakage and discomfort.

Freedom Dry

Freedom Dry enhances comfort and fit by utilizing a revolutionary low friction skirt surface.

The skirt fitting line (shown in red) features a low friction surface that delivers a superior seal and increases the facial area contact patch while significantly reducing excess skin tension. The result is a soft and supple feeling mask with a dramatically improved seal.

Metal parts in ultraslim frame, ultra-wide and stylish one-window mask.

FREEDOM BUCKLE PAT. P.

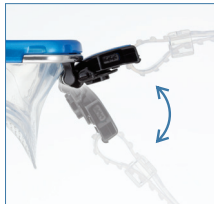

The Five (5) Angle Strap Adjustor rotates a full 180 degrees and allows for micro-adjustments, which accommodates varying head sizes while reducing face pressure, maintaining optimum fit, and preventing unnecessary damage to the buckle.

5 Step Variable Strap Adjuster Function

By fixing the angle of the strap in five (5) stages on the left and right from the upper position to the lower position, it is possible to micro adjust varying pressure points of the mask seal.

Vertical Axis Rotation Function

The buckles move inwards and outwards, so the straps fit perfectly to people with large or small faces. The folding buckles make the mask compact for carrying.

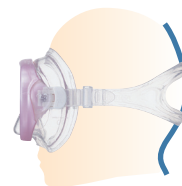

METAL PARTS

M1001 only

Stainless steel allows for a slim design while providing stability and security.

3D MASK STRAP PAT.

- Durable silicone mouthpiece with comfort fit.
- Three-dimensional pipe curve designed to minimize water resistance.
- One-touch adapter that can be easily detached and attached to a mask.
- Flexible silicone joint reduces strain on the mouth.

■ HYPERDRY ELITE DRY TOP

The Hyperdry Elite maintains the same superior dry performance and keeps the snorkel completely void of water by quickly and efficiently closing the float when submerged or hit by waves.

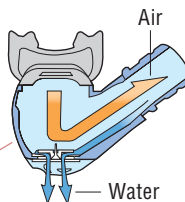

Hyperdry Elite Dry Top Internal Structure

Lifting the float will close the valve and prevent water from flooding.

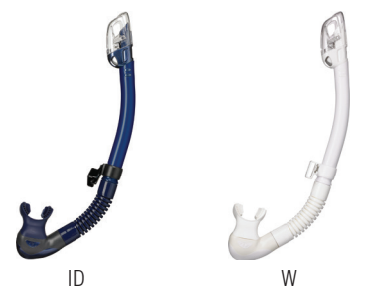

■ HIGH FLOW PURGE VALVE

The periphery of the valve always remains at the lowest point even when snorkeling upright at the water surface, so water is easily cleared at all times. It prevents gurgling or sucking water when breathing.

SP0101QID

SP0101QW

Superior design and functionality helps the snorkel clear water easily.

Platina II Hyperdry

PLATINA II HYPERDRY

PAT. Internal Volume: 9.2 ci / 150 cc
Dimension: 16.7 in x 4.3 in / 425 mm x 110 mm
Weight: 5.7 oz / 163 g

Comfort Swivel

Snorkel keeper swivels to enhance comfort and fit.

High Flow Purge

Large diameter purge valve allows for easy snorkel clearing.

Hyperdry System

TUSA's exclusive splash guard for snorkels.

SP-170

SP-170QB

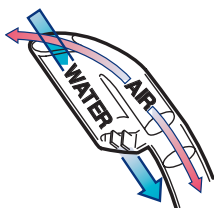

SP-170QID

- Durable silicone mouthpiece with comfort fit.
- Three-dimensional pipe curve designed to minimize water resistance.
- One-touch adapter that can be easily detached and attached to a mask.
- Flexible silicone joint reduces strain on the mouth.

HYPERDRY SYSTEM

The Hyperdry System keeps the main pipe dry by ejecting water through an independent escape pipe. This unique design utilizes the angle of the snorkel pipe and the resilience of the water surface to eject water.

COMFORT SWIVEL

The Comfort Swivel adapter makes it possible to slip the mask strap into the slit with no hassles. The two-part construction allows the snorkel to rotate and can be attached in a horizontal position.

1. This mechanism allows the snorkel to swivel to the optimum angle to reduce tension and stress for enhanced comfort and performance (Fig. 2) as compared to earlier models (Fig. 3).

2. Adjustments are made by sliding the adaptor's position forward or backward - a forward or rearward position may be selected (Fig. 4).

Ideal for travelers

- Packable, light weight, great for carry-on travel.
- A compact blade design that produces big power.
- The perfect fins for both diving and snorkeling.
- A fin blade "Utility Hole" ideal for carrying and stowing.

Barefoot Freedom

- The "Round Edge Structure" foot pocket provides the softest, most comfortable barefoot experience.
- An ultra-soft and flexible monoprene foot pocket conforms to most foot shapes.
- A highly elastic Bungee Strap secures the foot and requires no adjustment.

Utility Attachment Point

WORN BAREFOOT. WILL TRAVEL.

TUSA HyFlex

A NEW ERA OF FINS

TUSA HyFlex **SW/TCH pro.**

TUSA HyFlex **SW/TCH**

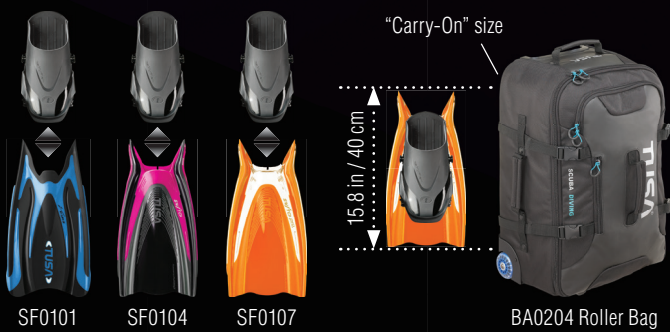

TUSA HyFlex **Vesna**

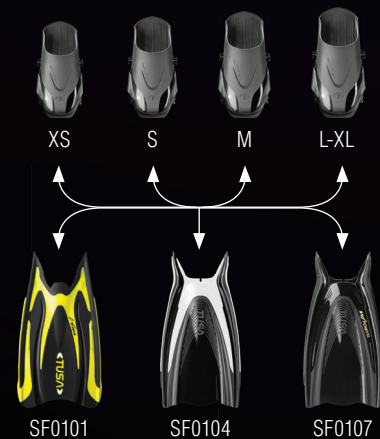

TRAVEL FRIENDLY

Separate the fin blade from the foot pocket for a compact and lightweight travel-friendly package.

INTERCHANGEABLE BLADE

Interchange with other compatible TUSA HyFlex fin blades to your existing foot pocket for a new diving experience.

What fits in a carry-on bag?

- M2001S Mask
- SP0101 Snorkel
- SF0104 Fins
- RS1207 Regulator
- SS0007 Octo
- SCA-270 Gauge
- BC0602B BC Jacket
- DB0101 Dive Boots
- 3mm Wetsuit

① Position the fin upside down to ensure that the nuts remain secure within the foot pocket.

② Use a 3mm allen wrench, and turn in a counterclockwise motion to remove the screws from both sides of the fin blade.

③ Pull both sides of the fin blade in an outward direction to remove it from the foot pocket.

④ Install the TUSA HyFlex fin blade into the foot pocket.

⑤ Place the screws back into the nuts, and use a 3mm allen wrench to tighten the screw.

⑥ It is very important to correctly secure the fin blade before use.

Award-winning fins with a stiffer blade for the advanced diver.

Dual exhaust system improves the breathing cycle.

Venturi Flow Adjustment

Air assist on inhalation improves breathing resistance.

1ST STAGE

ULTRA-COMPACT BALANCED DIAPHRAGM

The R-600 is an ultra-compact, lightweight balanced diaphragm first stage delivering superior performance. It weighs in at just 630g making it ideal for travel and the weight-conscious diver.

Top performing pneumatic regulator.

RS-790

RS-790

S-90

R-700

-  **Advanced Flow System**
Grants smoother air delivery due to the curved housing structure.
-  **Cold Water Ready**
Cold water ready for water temperatures below 50°F / 10°C.
-  **Environmentally Sealed 1st Stage**
First stage is sealed against contaminants and freezing water.
-  **Ortho-Conscious Mouth Piece**
Reduces bite tension in the jaw.
-  **Pneumatically Balanced 2nd Stage**
Provides optimal breathing resistance at any depth.
-  **Venturi Flow Adjustment**
Air assist on inhalation improves breathing resistance.

1ST STAGE

RS-790 DIN

R-700 DIN

N/A AUS

1ST STAGE

■ DRY AMBIENT PRESSURE CHAMBER

The dry ambient pressure chamber on the R-700 prevents water contact with the diaphragm and spring maximizing performance, at any depth, in cold water conditions below 50° F / 10° C.

2ND STAGE

■ PNEUMATICALLY BALANCED SYSTEM

The S-90 second stage is a pneumatically balanced design. A small chamber positioned at the end of the poppet assembly traps air and forces the poppet back against the intermediate pressure orifice. This provides decreased inhalation resistance and increases smooth breathing in all conditions.

RS1001

RS1001

S0001

R1000

-  **Cold Water Ready**
Cold water ready for water temperatures below 50°F / 10°C.
-  **Ortho-Conscious Mouth Piece**
Reduces bite tension in the jaw.
-  **Venturi Flow Adjustment**
Air assist on inhalation improves breathing resistance.

R1000 DIN

Advanced Weight Loading System III (A.W.L.S. III)

Easy loading, single locking weight integrated BCD system.

Independent Harness System (I.H.S.)

Harness and air cell move independently for advanced control.

RiteTite Buckle

A 2-position cam strap for quick and easy adjustment.

Ultimate Stabilizing Harness (U.S.H.)

Completely eliminates tank roll.

Waist Support System (W.S.S.)

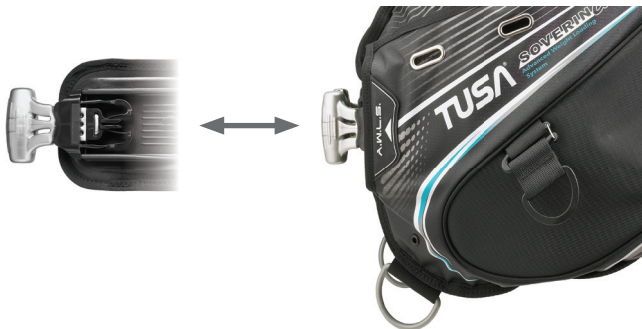

Enhanced comfort and fit due to advanced weight distribution.

TUSA Duo Air II (SS0002), integrated second stage regulator/power inflator is compatible.

ADVANCED WEIGHT LOADING SYSTEM (A.W.L.S. III)

A secure single locking integrated weight system that allows you to quickly and easily secure your weight pockets. The A.W.L.S. allows the diver to insert weights into the weight-cartridges and loading them easily into the front of the BC jacket.

Size	Lift Capacity	Weight (Dry)	Waist (Est.)
XS	80N / 18.0 lbf / 8.2 kgf	7.1 lbs / 3.2 kg	23.7-27.6 in / 60-70 cm
S	110N / 24.7 lbf / 11.2 kgf	7.1 lbs / 3.2 kg	25.6-31.5 in / 65-80 cm
M	140N / 31.5 lbf / 14.3 kgf	7.3 lbs / 3.3 kg	29.6-35.5 in / 75-90 cm
L-XL	170N / 38.2 lbf / 17.3 kgf	7.5 lbs / 3.4 kg	33.5-39.4 in / 85-110 cm

INDEPENDENT HARNESS SYSTEM

The Independent Harness System isolates the BC jacket's harness from the air cell, tightly supporting the tank even with changes in air cell inflation/deflation. The I.H.S. prevents tank slippage and eliminates any gaps between the tank and your back.

ULTIMATE STABILIZING HARNESS

TUSA's Ultimate Stabilizing Harness completely eliminates tank roll and delivers an amazing fit. The U.S.H. securely holds the air cylinder in place with optimally placed rails and brings the tank closer to the body increasing tank control while reducing weight.

RITETITE BUCKLE

The RiteTite Buckle is a 2-position cam strap for quick and easy adjustment. While the strap is being looped through the buckle, the buckle stays in place without needing to be held. This allows for more control and stability. This feature is part of all TUSA BC's.

The next evolution of the rugged, workhorse Liberator series.

Underwater Scooter

Diver Propulsion Vehicle

SAV-7 EVO3

N/A AUS

- Dimension (L x W):
28.4 in x 13.4 in
720 mm x 340 mm
- Weight (with battery):
45 lbs / 20.4 kg
- Submerged unit weight:
1.1 lbs / 0.5 kg
- Speed: 0 ~ 2.8mi/h (4.5km/h)
- Active depth:
Approx. 230 ft / 70 m
- Active range: 5.9 mi / 9,400 m
- Body: Shock resistant ABS resin
- Motor: 24V Brushless motor
- REV reducer:
 - Ring epicyclical gear speed reducer
- Speed adjuster:
 - Rotational speed control
 - Variable pitch-type propeller (3 steps)
- Safety devices:
 - Sensation current shut-down device
 - Water leakage sensor function turns on warning lamp when water enters the motor or battery housing, and automatically shuts down operations
- Accessories:
 - Water-cooling motor deployment
 - O-ring seal for the main body
 - O-ring seal for the propeller end of the body
 - Silicone grease

Hands-free riding with the scooter saddle

Hands-free is an innovative riding style that allows an operator to steer the scooter with body movement; much like a seal. This inline body placement is more streamlined to effectively decrease fatigue, reduce air consumption, and extend your dive time. Go further, get there faster, and have a lot more fun along the way. The hands-free riding style increases your options while diving. You are no longer limited to the hands-on riding style required by other vehicles. The possibilities are endless.

VARIABLE SPEED CONTROL

Quick and smooth speed control is now at your finger tip. Speed adjustments are made via an accelerator lever that changes the rotational speed of motor while vehicle is in use. Adjustments are very smooth, allowing user to fine-tune speed. This new design provides a far more advanced control system than other underwater scooters.

TRANSPORTATION OPTIONS

The SAV-7 EVO3 underwater vehicle improves your ability to transport items underwater. Your hands are free to carry what you need. Additionally, fold out wings on both sides of the saddle are available for towing divers or attaching other items of equipment.

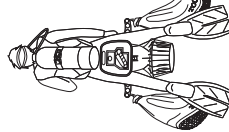

LED INDICATOR

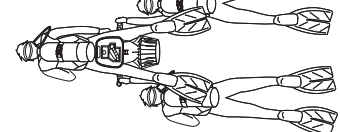

When the main switch is turned on, the battery indicator lights up. An LED indicator displays the battery level.

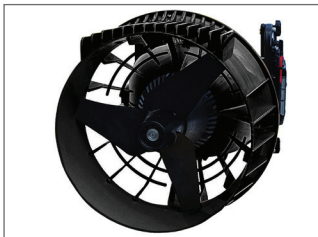

Carrying

Triple Riding

PITCH SELECTION

Before riding, rotate the variable pitch dial in advance. You can adjust the angle of the propeller in three (3) steps. By adjusting the propeller characteristics according to the usage environment. Fine speed adjustment is possible.

	Acceleration	Maximum Speeds	Battery Consumption
PITCH 1	●●●●●●	●●●●●●	●●●●●●
PITCH 2	●●●●○○	●●●●○○	●●●●○○
PITCH 3	●●○○○○	●●○○○○	●●○○○○

UNDERWATER RESISTANCE REDUCTION

To minimize underwater resistance and to allow for effortless underwater maneuvering, the scooter is designed to be steered hands-free. In doing so, the saddle helps to hold the diver in place, and allows the diver to steer the scooter freely. Even relatively sharp turns are made possible when riding hands free.

TUSA's roller dive bags are built durable for all types of travel. Whether it's a weekend getaway or an extended trip out of the country, TUSA has a bag to suit your needs.

Large Roller Bag

Available Colors

HYPERDRY ELITE DRY TOP

Hyperdry Elite Dry Top Internal Structure

The Hyperdry Elite maintains the same superior dry performance and keeps the snorkel completely void of water by quickly and efficiently closing the float when submerged or hit by waves.

Lifting the float will close the valve and prevent water from flooding.

Pure Silicone
Pure silicone FDA regulation compliant.

Hyperdry Elite - Dry Top
TUSA's exclusive dry-top for snorkels.

High Flow Purge
Purge valve for clearing water.

- Three-dimensional pipe curve for ergonomic fit.
- One touch adapter that can be easily detached and attached to a mask.
- Excellent durability with comfort fit.

Full Foot Rubber Fin

UF1202

N/A AUS

- Short blade design
- Soft all-rubber construction
- Open-toe, full foot length for maximum performance
- Low-ankle slip on
- Ideal for snorkeling and tropical diving

TUSA PERFORMANCE TECHNOLOGY FEATURES

MASKS

3D SYNQ

TUSA has developed a unique Fitting Ring that has been built into the Mask Skirt. This technology enables the Mask Skirt to mold to all face shapes providing the ideal fit, seal, and underwater experience.

Swift Buckle 3D

TUSA has designed the perfect buckle and mask strap. The NEW low profile buckle is slim and light weight. The easy adjustment buckle and strap is silent and effortless when making adjustments.

Freedom Technology

Freedom Technology is a set of four (4) technologies to enhance fit and performance exclusive to TUSA. Freedom model masks feature a dimpled skirt surface with varied silicone thicknesses and stability ridges in addition to a proprietary low-friction skirt surface on the fitting line.

Freedom Technology with Fit II

Freedom Technology is a set of technologies to enhance fit and performance exclusive to TUSA. Freedom model masks feature a dimpled skirt surface with varied silicone thicknesses and stability ridges in addition to a proprietary low-friction skirt surface on the fitting line. The new Fit II technology adds strength and rigidity to the skirt for use in tough environments.

TRI-MIX Frame

Three (3) distinct layers combined to produce one superior frame structure. Polyurethane (PuRiMaX) material bumper protection and a cross-beam metal frame structure combined with the superior toughness of the polycarbonate frame bolted together to create a seriously tough mask.

UV 420 Lens Treatment

UV 420 Lens Treatment protects against harmful high-energy visible (HEV) light and its potential to damage the Retina. HEV light is not just present on sunny days, but overcast days as well. Therefore, it is extremely important to protect your eyes against UV and HEV light in all weather conditions when diving.

180 Buckle System

The buckle rotates a full 180 degrees to accommodate varying head sizes for optimum fit. The thin frame and rotation of the buckle allows the mask to be folded into a compact size.

3D Mask Strap

TUSA's patented 3D Strap is a true three-dimensional design that snugly fits against the head's natural curvature. The 3D strap offers unprecedented comfort and fit unlike standard flat mask straps.

Angle Strap Adjustor

The Five (5) Angle Strap Adjustor allows for a five position micro-adjustment on both the left and right sides of the mask. This enables vertical (up/down) and horizontal (left/right) pressure on the face to be delicately adjusted for the optimum fit.

SNORKELS

Comfort Swivel

The Comfort Swivel adapter makes it possible to slip the mask strap into the slit with no hassles. The two-part construction allows the snorkel to rotate and can be attached in a horizontal position.

High Flow Purge

The High Flow Purge design used on TUSA snorkels offers a covered large diameter purge valve for simple, quick clearing, reducing the amount of water remaining in the mouthpiece in an instant.

FINS

Active Pivoting System

The combination of uniquely positioned holes that reduce drag while maintaining constant propulsion and the built-in fin stop creates a soft kick that produces great power.

Anatomic Fin Strap

The AFS is anatomically shaped to offer a balance of flexibility and control to increase comfort, power transfer and to significantly reduce heel slippage found in many standard flat fin straps.

Angled Blade Design (A.B.D.)

The Angled Blade Design accommodates for this anatomical characteristic and ensures maximum efficiency throughout the kicking cycle.

Bungee Strap

The heavy duty elastic fin strap provides easy donning and doffing of fins. The quick adjustment accommodates five (5) adjustable positions.

EZ Strap and Buckle System

TUSA's EZ strap and Buckle System allows fins to be quickly and easily adjusted with minimal effort. Adjustment can be made while the fins are worn, allowing for a precise fit and ease of removal when necessary.

REGULATORS

Adjustable Control Knob

The Adjustable Control Knob designed to better control breathing resistance.

Advanced Flow System

The Advanced Flow System allows ease of air flow and makes air delivery smoother due to the curved housing structure.

Angle Strap Adjustor with Side Hold

The Skirt Mounted Five (5) Angle Strap Adjustor allows for a five position micro-adjustment on both the left and right sides of the mask. This enables vertical (up/down) and horizontal (left/right) pressure on the face to be delicately adjusted for the optimum fit.

Anti-Reflective (A/R) Lens Treatment

TUSA's Anti-Reflective (A/R) Lens Treatment decreases internal and external reflected light. This reduction increases light transmission to 95% resulting in significantly enhanced color, clarity, contrast and better overall vision underwater.

Corrective Lens

Corrective Lenses are offered on several styles of masks. This option allows the diver to choose right and left lens powers in both a variety of diopters for maximum flexibility and for a custom fit.

CrystalView Optical Glass

CrystalView optical glass lenses provide superior clarity, color and transmission of light over standard glass lenses used by the competition. Up to 15% of available light can be lost with a standard glass lens due to impurities and reflectivity. TUSA's CrystalView lenses transmit up to 95% of available light to the diver for clear crisp vision. CrystalView lenses are used in all PRO models masks.

Hyperdry Purge

Clearing a mask has never been easier thanks to our patented Hyperdry System. Simply breathe out through your nose and any water that has accumulated in your mask is forced out through a one-way purge valve. Once the mask is clear, the valve seals shut.

Panoramic View

Panoramic View masks feature a variety of designs offering an incredibly wide field-of-view. Several designs incorporate minimum frame volumes, domed side-windows, reduced frame structures as well as three and four window styles for maximum vision.

Quick-Adjust Buckle System

The Quick-Adjust Buckle System incorporates a newly-designed low-profile buckle. The result is a compact, lightweight, technologically advanced mask design that can be easily and quickly adjusted for a perfect fit.

Round Edge Skirt

TUSA's Round Edge Skirt features a proprietary round edge cross-sectionally shaped skirt. This rounded edge results in a soft fit that suppresses pressure and reduces creasing left on the face. The "planar fit, instead of linear fit" silicone skirt maintains great fit and unprecedented comfort.

UV Lens Treatment

TUSA's UV Lens Treatment provides 100% protection from harmful UVA and UVB rays. Blocking of the ultraviolet spectrum (under 400nm) provides greater eye protection without sacrificing light transmission or vision.

Hyperdry Elite Dry Top

The Hyperdry Elite maintains the same superior dry performance and keeps the snorkel completely void of water by quickly and efficiently closing the float when submerged or hit by waves.

Hyperdry System

The Hyperdry System keeps the main pipe dry by ejecting water through an independent escape pipe. This unique design utilizes the angle of the snorkel pipe and the resistance of the water surface to eject water.

ForcElast Technology

A proprietary thermoplastic elastomer (TPE) compound precisely positioned in an advanced blade and foot pocket structure. ForcElast delivers superior propulsion, efficiency and speed even with moderate power input.

Propeller Technology

TUSA's advanced split fins employ Propeller-Fin™ Technology, which delivers ultra-high performance with a low amplitude rapid flutter kick. As the fin moves through the water its two wing-shaped surfaces create lift and forward propulsion like a propeller. Efficiency is increased while drag and effort is reduced.

Powered by PuRiMaX

The fin blade is made of top quality Polyurethane material that provides a quicker response to movement over rubber and plastic fins.

TUSA Direct Reflect

This advanced reflective material brightly reflects 180 degrees back to the original light source. Providing high visibility in low light conditions.

Vortex Generator

Six (6) performance ridges positioned behind the blade vent reduce resistance, creating a smoother and more efficient kick cycle.

Teflon Coated Plate

The Teflon Coated Plate prevents "dry mouth." Condensation forms on the brass plate adding moisture to the dry air released from scuba cylinders.

Click Spring Adjustment

The Click Spring Adjustment feature is exclusive to TUSA. It is a five (5)-position adjustment knob designed to better control breathing resistance.

TUSA PERFORMANCE TECHNOLOGY FEATURES

Cold Water Ready

The Cold Water Ready feature enables the diver to use the regulator in water temperatures below 50° F / 10° C.

Environmentally Sealed 1st Stage

The use of a secondary diaphragm and piston sealing the 1st stage preventing contamination or freezing when the regulator is submersed in contaminated or freezing water.

Ortho-Conscious Mouth Piece

The Ortho-Conscious Mouth Piece feature prevents jaw fatigue. The ridges and flexible material allow the diver to have more control of the mouth piece and reduces tension in the jaw.

BC JACKETS

3D Hybrid Cubic Air Cell

The 3D Hybrid Cubic Air Cell combines the features of a wrap-around style BCJ and a back-inflation BCJ into a unique streamlined hybrid design. The air cell offers increased lift capacity over standard back-inflation jackets and a more streamlined, comfortable fit underwater and on the surface.

Active Purge Assist (A.P.A.)

Exclusive to TUSA, the Active Purge Assist is a pneumatically assisted power inflator. Using a piston, the power inflator activates a stainless steel cable connected to the shoulder dump valve. The APA assures a quick response when deflating air from the BC.

Advanced Weight Loading System II (A.W.L.S. II)

The 2nd generation A.W.L.S. continues to enhance TUSA weight integrated BC jackets by incorporating an ergonomic handle grip and quick-lock feature. Release the weight cartridges with ease by simply turning the handle grip vertically 90° in either direction.

Advanced Weight Loading System III (A.W.L.S. III)

A secure single locking integrated weight system that allows you to quickly and easily secure your weight pockets.

DIVE COMPUTERS / GAUGES

4 Gas Mix

This advanced feature allows the diver to preset four individual gas mixtures (Mix 1, Mix 2, Mix 3, Mix 4) from 21-100% for easy switching during the dive.

2 Gas Mix

This feature allows the diver to preset two Nitrox gas mixtures (Mix 1 and Mix 2) for easy switching during the dive as necessary. Mix 1: 21 to 50%, Mix 2: 21 to 99%.

Altitude Smart Mode

The Altitude Smart Mode allows the computer to automatically adjust for altitude diving.

Audible Alarm

TUSA's computers feature Audible and Visual Alarms for the most important dive data warnings. Ascent rate, maximum depth, no decompression limits, safety stop and several other key data can be set to alert the diver.

Backlit Display

Several TUSA computer instruments feature a Backlit Display for night diving or low-light situations. The bright backlight is activated by a touch of a button and the duration can be set for up to 10 seconds in length enabling the diver to view critical dive data easily and quickly.

Bluetooth® SMART

Bluetooth® SMART technology enables smartphones or tablets with the Diving LOG app downloaded to receive dive log data from the IQ1204 DC Solar Dive Computer via Bluetooth®.

Dual Time Display

Dual Time Display offers two time zones to be displayed simultaneously on the LCD.

Pneumatically Balanced 2nd Stage

A balance chamber added to the regulator 2nd stage, providing equal pressure to both sides of the LP seat greatly reducing inhalation effort.

Sequence Exhaust Assist System

The Sequence Exhaust Assist System gives the diver less resistance when exhaling due to its unique double exhaust design. The diver experiences smooth breathing cycles reducing air consumption and fatigue.

Swivel Hose

The Swivel Hose gives maneuverability to the 2nd stage. The hose can rotate 360 degrees allowing it to move freely with the diver's head motions.

Venturi Flow Adjustment

The Venturi Flow Adjustment allows for ease of breathing by controlling the direction of air through the mouthpiece.

Independent Harness System (I.H.S.)

The Independent Harness System isolates the BC jacket's harness from the air cell, tightly supporting the tank even with changes in air cell inflation/deflation. The I.H.S. prevents tank slippage and eliminates any gaps between the tank and your back.

RiteTite Buckle

The RiteTite Buckle is a two (2)-position cam strap for quick and easy adjustment. While the strap is being looped through the buckle, the buckle stays in place without needing to be held. This allows for more control and stability. This feature is part of all TUSA BC's.

Ultimate Stabilizing Harness (U.S.H.)

TUSA's Ultimate Stabilizing Harness completely eliminates tank roll and delivers an amazing fit. The U.S.H. securely holds the air cylinder in place with optimally placed rails and brings the tank closer to the body increasing tank control while reducing weight.

Waist Support System (W.S.S.)

The Waist Support System significantly enhances comfort and fit by dispersing the weight load around the hips. The W.S.S. integrates the adjustable shoulder harness system with the rear stabilizing plate and cummerbund to effectively unload the hips while ensuring a snug fit.

Free Dive Mode

The Free Dive Mode calculates dive times and surface intervals for free diving.

Optional Deep Stop

An optional safety stop on No Deco dives exceeding a depth of 80 feet.

PC Downloadable

TUSA's PCLogbook, TUSA DataLog PC, and DiverLog Mac interfaces allow the diver to transfer complete log and profile history from the dive computer to a personal computer or upload user settings to the computer. A PC interface unit is sold separately.

Rechargeable

TUSA TC1's built-in rechargeable lithium-ion battery eliminates the need for battery replacement, and offers up to 25 dives in diving mode and up to 3 months in standby mode.

Solar Rechargeable

Rechargeable by sunlight or indoor fluorescent light. The solar rechargeable feature eliminates the need for battery replacements.

Step-Back Feature

The Step-Back Feature allows user to navigate forward or backward through the menus.

User Replaceable Battery

Convenience and ease-of-maintenance is imperative in the design of today's dive computer. Each of TUSA's computers offer a user-friendly replaceable battery that can be changed on a moment's notice using standard widely-distributed batteries.

Vibration Alarm

TUSA TC1 is equipped with Vibrating Alarm Technology. This vibration is similar to the vibration setting on most cellular telephones. The user is alerted to important dive data with several vibrations instead of an audible alarm that can distract your dive partners.

TUSA SPORT

Pure Silicone

Pure silicone FDA regulation compliant. (Rubber articles intended for repeated use / 21 CFR 177.2600) TUSA Sport uses pure silicone for the snorkel mouth-piece and mask skirt.

ClearVU Tempered Glass

ClearVu tempered glass lenses provide superior clarity, color, transmission of light and safety over standard glass.

EZ Strap and Buckle System

Allows masks to be quickly and easily adjusted with minimal effort. Allowing for a precise fit and ease of removal when necessary.

High Flow Purge

A large diameter purge valve for simple, quick clearing, reducing the amount of water remaining in the mouth-piece.

Hybrid Blade System (H.B.S.)

The patented Hybrid Blade System offers unparalleled propulsion, efficiency and power transfer in a multi-compound design. The H.B.S. is composed of incredibly stiff side rails and an ultra-responsive membrane blade giving unlimited kicking potential.

Hyperdry Elite - Dry Top

The latest innovation in dry snorkel technology utilizing an independent high buoyancy float for superior dry performance. This keeps the snorkel completely dry by quickly and efficiently closing the tube opening.

Hyperdry Semi - Dry Top

Keeps the main snorkel pipe dry by ejecting water through an independent escape pipe.

Protective Mouth-Piece Cover

Helps to maintain and extend the life of the snorkel's mouth-piece.

Travel Friendly Blade Design

A compact blade design allows your snorkel gear to be an easy and light travel option. Giving you more flexibility when packing for your next adventure.
